About Avonet

Avonet is a technology solutions company striving to be a regional leader in its selected domains. We bring technology that changes the way you live and perform. Our in-house developed CRM and Delinquency Management Solutions are changing the competitive landscape of banking and financial services industry.

Knowing that we cannot create everything by us, we have partnered with the best in class technology firms to offer our valued clients solutions that exceed their expectations. Avonet continues to challenge the rules of the game and committed to set new standards for others to follow. Our quest for innovations, passion to accept challenges and desire to be the leaders make us always busy and engaged to offer you nothing but the best.

Challenge

Think180 uses KeyedIn - Project Management Platform, where all the invoices pertaining to their program work is created and then manually duplicated in their accounting software, Xero.

This process consumes a significant amount of administrative effort as the invoices have to be created in both the systems by the accounting executive.

Who did you engage with?

Think180's accounting and project management team closely worked with Avonet team in automating the manual invoice creation process in Xero.

Solution

Avonet built an interface using web technologies to transfer invoices from KeyedIn to Xero in Realtime without having to manually create the invoices in Xero accounting system. Once the invoices are created in KeyedIn, the invoices are then displayed on a custom built web interface to verify and synchronize to Xero in draft status.

Solution leveraged KeyedIn and Xero APIs to perform the data transfer with an additional security layer via OAuth2.0.

Outcome

- 100% reduction of invoicing errors
- 50% reduction in administrative effort
- Additional revenue channels for Think180 by reselling the interface to KeyedIn.
